## ABSTRACT OF THE DISCLOSURE

A process for forming a patterned thin film structure on a substrate or inmold decoration film is disclosed. A pattern is printed with a material, such as a
masking coating or ink, on the substrate, the pattern being such that, in one
embodiment, the desired structures will be formed in the areas where the
printed material is not present, i.e., a negative image of thin film structure to be
formed is printed. In another embodiment, the pattern is printed with a material
that is difficult to strip from the substrate, and the desired thin film structures will
be formed in the areas where the printed material is present, i.e., a positive
image of the thin film structure is printed. The thin film material is deposited on
the patterned substrate, and the undesired area is stripped, leaving behind the
patterned thin film structure.
